

The STEM Immersion Guide for Schools and Districts

A Collaboration of Arizona STEM Network Led by SFAz and Maricopa County Education Service Agency

Updated December 9, 2014

Exploratory Model	Introductory Model	Partial Immersion Model	Full Immersion Model
<p>The Exploratory Model describes a regular school day experience, with STEM-related EXTRA CURRICULAR opportunities offered to students in addition to the regular school day. These experiences may include, but are not limited to; after school clubs, summer programs, science fairs, robotics clubs, video production clubs, etc.</p>	<p>The Introductory Model describes a regular school day experience, with STEM-related experiences offered in addition to the current curriculum. These experiences may include, but are not limited to; integrated STEM units delivered once the state testing is complete, supplementary stand-alone learning units offered through industry or non-profit partnerships, etc.</p>	<p>The Partial Immersion Model describes a non-traditional school experience where STEM-related experiences are integrated into the curriculum. These experiences may include, but are not limited to; teaching to a school-wide STEM theme, teaching year-long integrated problem/project-based learning units, teaching dual-enrollment programs, teaching in a "school within a school" model, etc.</p>	<p>The Full Immersion Model describes a non-traditional school experience where STEM-related experiences determine the school's curriculum. Full Immersion schools look more like 21st Century work-place environments rather 20th century K-12 school environments. Problem-based learning drives the curriculum and instruction. Students constantly collaborate to solve authentic problems, propose solutions, and contribute ideas to the larger community.</p>
<p><i>A 1. Exploratory Model Descriptors:</i></p> <ul style="list-style-type: none"> • School or district has defined STEM as a priority • STEM programs are traditionally "stand alone" • Programs are conducted outside the regularly scheduled school day • Programs are assigned to staff as additional duties • Programs are optional • Includes a basic level of family engagement and outreach programs (i.e. math and science 	<p><i>A 2. Introductory Model Descriptors:</i></p> <ul style="list-style-type: none"> • Implementation in addition to the regular school curriculum during the school-day • Opportunities are provided for student participation in problem-solving and project-based instruction with integrated content across STEM subjects • Results in teaching through product development (school/parent presentations, science fairs, evening STEM nights, etc.) • Initial collaboration with one or 	<p><i>A 3. Partial Immersion Model Descriptors:</i></p> <ul style="list-style-type: none"> • Integration of problem/project-based learning into the regular curriculum through STEM signature programs • Opportunities are provided for student participation in problem-solving and project-based instruction with integrated content across STEM subjects • Interdisciplinary instruction • Some inter-grade level planning • Emphasis on product development • Several collaborations with 	<p><i>A 4. Full Immersion Model Descriptors:</i></p> <ul style="list-style-type: none"> • Whole school approach to teaching STEM education through a global mission and vision • Participation by all schools staff, classroom and special area teachers • STEM lessons are planned and aligned by all grade levels and special area classes to be integrated, spiraling in increased complexity and rigor, and constructivist in nature • Provides an opportunity for student participation in problem/project-based instruction with an end result of teaching through product

<p>family nights)</p> <ul style="list-style-type: none"> • Students explore various facets of STEM from project-based investigations to possible career pathways • Initial collaboration with one or more business partners, mentors, and/or STEM advocates 	<p>more business partners, mentors, and/or STEM advocates</p> <ul style="list-style-type: none"> • Includes <i>multiple points of contact with the families of STEM participants, and at least one family integration activity</i> 	<p>business and industry partners in the geographical area occurs, along with mentors and STEM advocates</p> <ul style="list-style-type: none"> • Collaborations and partnerships with Higher Education are established • Includes <i>multiple points of contact with families of STEM participants, and a minimum of three family integration activities</i> 	<p>development</p> <ul style="list-style-type: none"> • Several collaborations with business and industry partners in the geographical area occurs, along with mentors and STEM advocates • Collaborations and partnerships with Higher Education • Includes <i>multiple and on going points of contact with families of STEM participants including several family integration activities</i>

Exploratory Model	Introductory Model	Partial Immersion Model	Full Immersion Model
LEADING			
<p>Leading within the Exploratory Model involves supporting teachers in the creation of extra-curricular, after-school STEM-related experiences (programs) for students that choose to participate. Leaders must embrace a mindset that includes; leading by example, creating an environment of high expectations, taking responsibility for sparking a passion for learning, be excited to prepare students both academically and socially for their future careers, and creates and communicates a "shared vision" of purpose and process.</p>	<p>Leading within the Introductory Model involves supporting teachers in the planning and implementing of STEM-related experiences that are in addition to the regular curriculum and taught to students during the school day. Leaders arrange schedules so that teachers may plan units as a grade-level or content-area team. Leaders support structures for teachers including common planning time within the school day to support data-driven collaboration and professional learning (e.g. Grade level team). Leaders must embrace a mindset that includes; leading by example, creating an environment of high expectations, taking responsibility for sparking a passion for learning, be excited to prepare students both academically and socially for their future careers, and creates and communicates a "shared vision" of purpose and process.</p>	<p>Leading within the Partial Immersion Model involves setting the expectation that all staff plan and implement STEM-related experiences that are integrated into the regular curriculum. Leaders arrange schedules and set the expectation that teachers plan integrated yearlong units as a grade-level or content-area team. Leaders set the expectation that teachers take on more of a facilitator role in guiding student learning through inquiry. Leaders support structures for teachers including common planning time within the school day to support data-driven collaboration and professional learning (e.g. school within a school model). Leaders must embrace a mindset that includes; leading by example, creating an environment of high expectations, taking responsibility for sparking a passion for learning, be excited to prepare students both academically and socially for their future careers, and creates and communicates a "shared vision" of purpose and process.</p>	<p>Leading within the Full Immersion Model involves setting the expectation that all staff plan and implement STEM-related experiences that are the main curriculum. Leaders arrange the schedule and set the expectation that all teachers plan integrated yearlong units as a collaborative school team. Leaders set the expectation that teachers act as facilitators in guiding student learning through inquiry. Leaders support structures for teachers including common planning time within the school day to support data-driven cross-curricular collaboration and professional learning (e.g. whole school model). Leaders must embrace a mindset that includes; leading by example, creating an environment of high expectations, taking responsibility for sparking a passion for learning, be excited to prepare students both academically and socially for their future careers, and creates and communicates a "shared vision" of purpose and process.</p>

<p><i>B 1. Administrative Leadership provides:</i></p> <ul style="list-style-type: none"> • Decide program purpose/content/curriculum • Support structures for students • Select target audience • Resource allocation (materials/supplies) • Program location/work space • Implementation timelines/calendars • Communication strategies • Professional development plan for teachers/staff • Budget development/oversight • Program evaluation protocols • Advocacy and marketing for program • Strategies for sustainability • Outreach to business and industry 	<p><i>B 2. Administrative Leadership provides:</i></p> <ul style="list-style-type: none"> • Decide program purpose/content/curriculum • Support structures for students • Solo to collaborative, or shared decision making • Professional development plan • Program location/work space • Resource allocation (materials/supplies) • Implementation timelines/calendars • Communication strategies • Budget development/oversight • Program evaluation protocols • Establish mentorships, both face to face and virtually • Strategies for sustainability • Advocacy and marketing for program • Outreach to business and industry 	<p><i>B 3. Administrative Leadership provides:</i></p> <ul style="list-style-type: none"> • Develops a shared mission and vision and program purpose/content • Establishment of an advisory committee for ongoing monitoring of mission, vision, scope of project that includes representatives from school, district, school board, community, higher education institutions, STEM industry • Establishment of a leadership cadre for collaborative decision making • Support structures for students including a non-graded advisory (guidance) program that focuses on setting and monitoring student goals and personalizing the student experience • Program evaluation • Establishment of end of course/program goals • Resource allocation (materials/supplies) • Program location/work space • Facilitation support with classified staff • Implementation timelines/calendars • Communication strategies • Professional development plan • Budget development/oversight • Evaluation protocols • Advocacy and marketing for 	<p><i>B 4. Exploratory Model	Introductory Model	Partial Immersion Model	Full Immersion Model
TEACHING			
Teaching within the Exploratory Model involves sponsoring or leading extra-curricular, after-school STEM-related experiences (programs) for students that choose to participate.	Teaching within the Introductory Model involves planning and implementing STEM-related experiences that are in addition to the regular curriculum and taught to selected students (i.e. grade level band) during the school day . Teachers may plan units as a grade-level or content-area team.	Teaching within the Partial Immersion Model involves planning and implementing STEM-related experiences that are integrated into the regular curriculum . Teachers plan integrated yearlong units as a grade-level or content-area team. The teacher takes on more of a facilitator role in guiding student learning through inquiry.	Teaching within the Full Immersion Model involves planning and implementing STEM-related experiences that are the curriculum . Teachers plan integrated yearlong units as a school team. The teacher acts as a facilitator in guiding student learning through inquiry.
<p><i>C 1. The teacher:</i></p> <ul style="list-style-type: none"> •Takes the lead role in planning and facilitating the in club or after school program •Provides direct instruction while leading students through guided inquiry investigations •Provides authentic, real world experiences with technology integration •Connects business/industry skills to instruction •Provides connections to outreach/service learning projects for students •Fosters collaboration, communication and social skills within the learning environment •Commits to on-going professional development in STEM content and pedagogy 	<p><i>C 2. The teacher:</i></p> <ul style="list-style-type: none"> •Provides direct instruction while leading students through guided inquiry investigations •Provides an opportunity for students to participate in guided inquiry and problem-solving •Selects cross-curricular STEM content •Provides authentic, real world problems within STEM content with technology integration •Connects business/industry skills to classroom instruction •Involvement in Professional Learning Communities (PLC) with other instructors at their grade level in their school, or across their district •Commits to on-going professional development in STEM content and 	<p><i>C 3. The teacher:</i></p> <ul style="list-style-type: none"> •Encourages student participation in identification of problem/project •Provides limited direct instruction while facilitating students moving through open-ended STEM investigations •Provides an opportunity for students to participate in guided and open-ended inquiry and problem-solving •Assists in selection of cross-curricular content that is embedded into the traditional curriculum •Provides authentic, real world problems within STEM content •Provides instruction with the outcome of product development, i.e. models, proto-types, etc. •Connects business/industry skills to classroom instruction 	<p><i>C 4. The teacher:</i></p> <ul style="list-style-type: none"> •Facilitates student participation in identification of problem/project •Provides a facilitative role while students move through open-ended STEM investigations •Provides an opportunity for students to participate in open-ended inquiry and problem-solving •Assists in selection of rigorous cross-curricular STEM content as the focus of the school curriculum •Provides authentic, real world problems within STEM content •Facilitates instruction with the outcome of product development, i.e. models, proto-types, etc. •Connects business/industry skills to classroom instruction •Fosters collaboration, communication and social skills

	<p>pedagogy</p> <ul style="list-style-type: none"> • Provides service learning projects for students • Fosters collaboration, communication and social skills within the learning environment • Embeds a variety of technology in the instructional process, including presentation tools, i.e. Power Points, smart boards, multi-media, Prezi, etc. 	<ul style="list-style-type: none"> • Fosters collaboration, communication and social skills within the learning environment • Involved in Professional Learning Communities (PLC) with other instructors at their grade level and additional grade levels, in their school or across their district • Commits to on-going professional development in STEM content and pedagogy • Provides opportunities and protocols for students to research and participate in outreach/service learning projects • Embeds a variety of technology in the instructional process, including using technology as a facilitation of student learning in investigations and problem-solving, i.e. data analysis, research, creation of multi-media 	<p>within the learning environment</p> <ul style="list-style-type: none"> • Involvement in Professional Learning Communities (PLC) with other instructors at their grade level and additional grade levels, in their school. • Commits to on-going professional development in STEM content and pedagogy • Provides opportunities and protocols for students to research and participate in outreach/service learning projects • Provides opportunities for students to conduct research in STEM-based content with links to university/college labs • Embeds a variety of technology in the instructional process, including using technology as a facilitation of student learning in a transformative instructional manner, i.e. using technology tools such as spectrometers, PCR machines, digital microscopes, robots, etc.

The STEM Immersion Guide for Schools and Districts

Exploratory Model	Introductory Model	Partial Immersion Model	Full Immersion Model
LEARNING			
Learning within the Exploratory Model involves engaging in a provided question or problem through an extra-curricular or after-school STEM-related experience that may or may not be related to the school curriculum . The learning is collaborative and engaging but may not be relevant or applied.	Learning within the Introductory Model involves engaging in a provided question or problem through STEM-related experiences that are in addition to the regular curriculum and taught to all students during the school day . The learning is collaborative and engaging and may be relevant and applied in a local context.	Learning within the Partial Immersion Model involves engaging in selected or negotiated questions or problems through STEM-related experiences that are integrated into the regular curriculum . Learning is collaborative, engaging, and is relevant and applied, with connections to local issues and/or industry.	Learning within the Full Immersion Model involves engaging in a student posed or negotiated question or problem through STEM-related experiences that are the curriculum . Learning is collaborative, engaging, and is relevant and applied, with connections to local issues and/or industry.
<p><i>D 1. The student:</i></p> <ul style="list-style-type: none"> •Engages in STEM content in an "out of the traditional classroom" experience, i.e. after school club, summer program •Engages in problem-based, teacher directed investigations that may result in solution or product creation •Collaborates in predetermined groups •Engages in relevant and authentic learning experiences that may be connected at least in part to local context •Uses a variety of technology in the investigative process including virtual, computer-based, mobile, and data collection devices •Participates in a level of self- 	<p><i>D 2. The student:</i></p> <ul style="list-style-type: none"> •Engages in integrated STEM content as an addition to the school curriculum •Engages in problem-based, teacher directed guided inquiry that may result in solution or product creation •Collaborates with peers in groups determined by teacher •Engages in relevant and authentic learning experiences that may be connected at least in part to local context •Engages in critical thinking, problem solving, and in depth learning while exploring STEM topics/projects/careers •Learns in the context of real-world connections with business/industry 	<p><i>D 3. The student:</i></p> <ul style="list-style-type: none"> •Engages in integrated STEM content as part of the school curriculum •Experiences the STEM content from cross-curricular, inter-disciplinary to trans-disciplinary •Engages in problem-based, student and teacher directed guided inquiry that results in solution creation or product development •Collaborates with peers in groups determined by teacher and/or project and intended outcomes •Engages in relevant and authentic learning experiences that are connected at least in part to local context •Engages in critical thinking, problem solving, and in depth learning while exploring STEM 	<p><i>D 4. The student:</i></p> <ul style="list-style-type: none"> •Engages in interdisciplinary STEM content as the focus of the school curriculum •Engages in problem-based, student directed open inquiry that results in solution creation or product development •Collaborates with peers in groups determined by project and intended outcomes •Participates in collaborative groups that foster innovation and risk in solutions creation and product/project development •Engages in relevant and authentic learning experiences that are driven at least in part by local context •Engages in critical thinking, problem solving, and in depth learning while exploring STEM

<p>evaluation</p> <ul style="list-style-type: none"> •Multiple in and out of school opportunities to inspire and inform under-represented and struggling students about careers in STEM fields •Engages in critical thinking, problem solving, and in depth learning while exploring STEM topics/projects/careers •May engage in opportunities to conduct research in STEM based content with links to university/college labs •May engage in real-world connections with business/industry •May have an opportunity to participate in service learning projects 	<ul style="list-style-type: none"> •Uses a variety of technology in the investigative process including virtual, computer-based, mobile, and data collection devices •Participates in outreach/service learning projects within the school or community •Participates in multiple points of contact with the families of the STEM participants, and at least three family integration activities •Multiple in and out of school opportunities to inspire and inform under-represented and struggling students about careers in STEM fields •May participate in a level of self-evaluation •May engage in opportunities to conduct research in STEM based content with links to university/college labs 	<p>topics/projects/careers</p> <ul style="list-style-type: none"> •Learns in the context of real-world connections with business/industry with possible opportunities to contribute to the knowledge base •Engages in opportunities to conduct research in STEM based content with links to university/college labs and possible opportunities to contribute to knowledge base •Uses a variety of technology in the investigative process including; virtual, computer-based, mobile, and data collection devices, web-based lessons, computer applications, researching, and reporting •Participates in outreach/service learning projects within the school or community •Participates in multiple points of contact with the families of the STEM participants, and at least three family integration activities •Multiple in and out of school opportunities to inspire and inform under-represented and struggling students about careers in STEM fields •Participates in a level of self-evaluation 	<p>topics/projects/careers</p> <ul style="list-style-type: none"> •Learns in the context of real-world connections with business/industry with opportunity to contribute to the knowledge base •Engages in opportunities to conduct research in STEM based content with links to university/college labs and opportunities to contribute to knowledge base •Uses a variety of technology in the investigative process including; virtual, computer-based, mobile, and data collection devices, web-based lessons, computer applications, researching, and reporting - communicate, collaborate and create in ways not possible without the technology •Participates in opportunities to establish protocols for research and participation in outreach/service learning projects •Participates in multiple points of contact with the families of the STEM participants, and at least three family integration activities •Multiple in and out of school opportunities to inspire and inform under-represented and struggling students about careers in STEM fields •Participates in a level of self-evaluation used for goal setting

The STEM Immersion Guide for Schools and Districts

Exploratory Model	Introductory Model	Partial Immersion Model	Full Immersion Model
EVALUATING			
Evaluating within the Exploratory Model involves informal feedback on program success that may include measures of self-efficacy, attitudes, interest, and motivation to pursue additional STEM related classes/experiences.	Evaluating within the Introductory Model involves formal feedback on program success , which includes student assessment data as well as measures of self-efficacy, attitudes, interest, and motivation to pursue additional STEM related classes/experiences.	Evaluating within the Partial Immersion Model involves program review that includes qualitative and quantitative data . Measures should include student achievement data as well as measures of self-efficacy, attitudes, interest, and motivation to pursue additional STEM related classes/experiences.	Evaluating within the Full Immersion Model involves comprehensive program review that includes multiple measures both quantitative and qualitative in nature . This would include data related to student achievement, classroom observations, attendance, and surveys at the student, teacher, administrator, parent, and community levels. Data is used to gauge achievement of program goals and inform design and implementation decisions.
<p>E 1. <i>The Evaluative Process includes:</i></p> <ul style="list-style-type: none"> •Teach- assess-adjust, then re-teach-assess-adjust •Invite industry experts/mentors to evaluate program •Provide professional development for teachers in the evaluative process and interpreting data •All teachers and students are immersed in a student-centered environment that supports the use of multiple indicators of success, such as performance, project-based and portfolio 	<p>E 2. <i>The Evaluative Process includes:</i></p> <ul style="list-style-type: none"> •Alignment of program to internationally benchmarked Common Standards •Pre and post student assessment surveys in interest, content, and attitudes •Participant and parent feedback surveys •Peer observation and dialogue included in quality assessment •Survey data used to inform program decisions •Research-based authentic and integrated assessments •Invite industry experts/mentors to evaluate program 	<p>E 3. <i>The Evaluative Process includes:</i></p> <ul style="list-style-type: none"> •Alignment of program to internationally benchmarked Common Standards •Development of curriculum support materials such as scope and sequence and pacing guides for a vertically and horizontally aligned curriculum centered on the state’s adopted rigorous standards, e.g. Next Generation Science Standards, 21st Century skills, and STEM integration (Engineering and Technology standards) •Pre and post student assessment surveys in interest, content, and attitudes 	<p>E 4. <i>The Evaluative Process includes:</i></p> <ul style="list-style-type: none"> •Alignment of program to internationally benchmarked Common Standards •Development of curriculum support materials such as scope and sequence and pacing guide for a vertically and horizontally aligned curriculum centered on the state’s adopted rigorous standards, e.g. Next Generation Science Standards, 21st Century skills, and STEM integration (Engineering and Technology standards) •Pre and post student assessment surveys in interest, content, and attitudes

<p>assessments</p> <ul style="list-style-type: none"> •Pre and post student assessment surveys in interest, content, and attitudes •Include informal and formal feedback (i.e. participant and parent feedback surveys) •Peer observation and dialogue included in quality assessment •Survey data used to inform program decisions 	<ul style="list-style-type: none"> •Provide professional development for teachers in the evaluative process and interpreting data •All teachers and students are immersed in a student-centered environment that supports the use of multiple indicators of success, such as performance, project-based and portfolio assessments •Performance assessments that allow students to demonstrate their understandings of STEM content and 21st Century skills 	<ul style="list-style-type: none"> •Participant and parent feedback surveys •Peer observation and dialogue included in quality assessment •Survey data used to inform program decisions •Research-based authentic and integrated assessments •Goal setting and monitoring driven by data •Development of an assessment and intervention plan to address gaps in student achievement and areas for extension •Development and implementation of student self-assessment •Plan for analysis of evaluation data and collaboration with leadership team to use the data to inform program decisions •High Schools: Develops a plan for student success at the post-secondary level •Include industry experts/mentors to evaluate program (Advisory Board) •Provide professional development for teachers in the evaluative process and interpreting data •All teachers and students are immersed in a student-centered environment that supports the use of multiple indicators of success, such as performance, project-based and portfolio assessments •Performance assessments that 	<ul style="list-style-type: none"> •Participant and parent feedback surveys •Peer observation and dialogue included in quality assessment •Survey data used to inform program decisions •Research-based authentic and integrated assessments •Goal setting and monitoring driven by data, <i>development of individualized learning plans that include student input</i> •Development of an assessment and intervention plan to address gaps in student achievement and areas for extension •Development and implementation of student self-assessment •Plan for analysis of evaluation data and collaboration with leadership team <i>and advisory team to use the data to inform program decisions</i> •Systematic collection of feedback related to outreach activities •Development of a process for program review that includes attendance, demographics and student achievement •On-going evaluations of authentic student learning and skill development related to industry expectations •Invite industry experts/mentors to evaluate program (Advisory Board) •Best /effective practice is employed for engagement, alignment and rigor
---	---	---	--

		<p>allow students to demonstrate their understandings of STEM content and 21st Century skills</p>	<p>for instructional improvement</p> <ul style="list-style-type: none"> • Demonstrate competencies in state high stakes assessments and college and career readiness (ex: ACT, SAT, TIMSS, PISA, PIAAC) • High Schools: Develops a plan for student success on the post-secondary level • Provide professional development for teachers in the evaluative process and interpreting data • Performance assessments that allow students to demonstrate their understandings of STEM content and 21st Century skills

SUSTAINING			
Sustaining at the Exploratory Level involves program development with an initial "start up" focus. By creating ongoing program evaluation and gathering reliable data, the goal is to build the initial program into the more comprehensive levels.	Sustaining at the Introductory Level involves program development with a long-term focus, ongoing program evaluation, consistent policies, reliable data and community interest and support.	Sustaining at the Partial Immersion Level involves program development with a long-term focus , ongoing program evaluation, consistent policies, reliable data and community interest and support.	Sustaining at the Full Immersion Level involves program development with a long-term focus , ongoing program evaluation, consistent policies, reliable data and community interest and support.
<p><i>G 1. Sustaining:</i></p> <ul style="list-style-type: none"> •Establishes leadership and support through common goals and mission •Establishes collaborative team to provide feedback based on assessments and evaluations •Establishes plan for materials replenishment •Builds capacity •Collects feedback and refines program implementation from students, teachers and parents •Establishes a two year fiscally responsible budget plan to assure sustainability of school/program •Establishes connections to 	<p><i>G 2. Sustaining:</i></p> <ul style="list-style-type: none"> •Establishes leadership and support through common goals and mission •Establishes collaborative team to provide feedback based on assessments and evaluations •Ensures that strategic plan and annual action plan addresses investment in professional development for personnel •Establishes plan for materials replenishment •Builds capacity •Collects feedback and refines program implementation from students, teachers and parents •Establishes a two year fiscally 	<p><i>G 3.
